GRF-54-85A Midsplit Rejection

The MoCA 2.0 compatible GRF-54-85A is a midsplit rejection filter designed to be installed on the input of legacy in-home devices that use 42/54 MHz. The filter prevents overload/interference to set-top boxes, modems, and other devices upon the activation of 85/102 MHz (mid-split) devices within the same premise.
